

# EUROPE EVOLUTION

## INVESTMENT OBJECTIVE

The Europe Evolution Fund aims to overperform the Stoxx Europe 600 EUR Index NTR (SXXR) (the "Benchmark Index"). In order to achieve its objective, the Fund gains exposure to the performance of a portfolio composed of 75 companies in the European zone selected according to extra-financial (ESG) and financial quality criteria, combined with risk control mechanisms. The Europe Evolution Fund selects it from a universe made up of the 200 largest European capitalizations with sufficient liquidity. The latter is done around two axes that are an ESG bias (described in the prospectus available on the website of the Management Company), 25% of the companies with the lowest ESG scores being eliminated, and an important focus on the quality of the selected shares, only the most financially sound companies and with the best fundamentals being retained. At the end of this selection, the weight assigned to each constituent and included in a range of 0.666% to 3.333%, is obtained via a proprietary methodology based on adjusting the weight of each share in the portfolio according to its relative contribution to the risk of the portfolio as a whole (equal risk contribution methodology) in order to obtain an optimal portfolio allocation in profile of risk/return. The fund's exposure to the basket of securities can vary from 0 to 150% in order to stabilize the risk profile of the fund. It is reviewed weekly and adjusted for volatility. The Europe Evolution Fund applies a policy of distributing a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments. If the dividends actually received by the fund are lower (respectively higher) than the fixed dividend distributed, the net asset value of the fund will be reduced (respectively increased) compared to a fund distributing all the dividends actually received. Without taking into account the dividends actually received by the fund, the impact of the policy of distributing a fixed dividend on the net asset value of the fund is greater in the event of a decrease from its initial level (negative effect) than in the event of an increase (positive effect). Thus, in the event of a continued bearish market, the decline in the fund's net asset value will be accelerated.

## PERFORMANCE SINCE INCEPTION

Performance	MTD	YTD	3 Months	6 Months	1 Year	3 Years	Since inception
EUROPE EVOLUTION Class I (EUR) DIST	-7.09%	9.24%	-3.22%	2.62%	23.80%	15.54%	56.61%

## MONTHLY COMMENT

Markets in October were roiled mainly by geopolitical tensions, but with strong economic performance in the background.

The escalating conflict in the Middle East has had a major impact on energy price volatility, raising investors' fears of renewed inflation, a sign that the difficulties of the past three years will continue. Nevertheless, the published statistics were reassuring, suggesting that these concerns will be addressed in the medium term. The clear trend toward the election of Donald Trump as US President has weighed on the bond market, with long rates soaring in anticipation of the fiscal loosening he would implement if elected.

Non-tech companies have reported excellent results, confirming their successful adaptation in a challenging environment and successful repositioning in the standardization of this environment.

After the US election, markets may experience some short-term volatility while analyzing the impact of the nominee's policies. But the Fed should independently continue its interest-rate normalization program and, barring further escalation of geopolitical conflicts, the market should return to its stable path.
