

ELEVA EUROPEAN OPTIMA

INVESTMENT OBJECTIVE

The investment objective of the Fund is to outperform the Stoxx Europe 600 EUR Index NTR (SXXR) (the "Benchmark Index") over a long-term horizon by exploiting investment opportunities on the equity markets, while providing a fixed stream of distributions. The Index is a broad liquid index with a fixed number of 600 components (600 stocks), representing large, mid and small capitalisation companies across 17 countries of the European region.

Equities of the Portfolio will be selected by a proprietary methodology designed by the Investment Manager which relies on a financial analysis combined with a non-financial analysis that ranks the instruments of the Investment Universe based on a combination of ESG (Environmental, Social, Governance) criteria. The fund is article 8 of SFDR. The Portfolio will be selected according to the Investment Manager's ESG rating, based on a best-in-universe approach. The methodology consists of two (2) steps: Step 1, strict exclusions: The Investment Manager excludes companies from the initial investment universe which have significant negative impacts on specific ESG factors (described in the prospectus), and Step 2, positive ESG screenings. The Fund reduces its ESG investable universe compared to its initial investment universe by at least 20%. The Portfolio will be rebalanced monthly respecting the methodology. However, the Management Company may decide to rebalance the Portfolio at any time at its discretion (the "Rebalancing Date"). The exposure of the Fund to European equity markets through the Portfolio may vary between 0% and 150% on a weekly basis at least. As a result, the exposure may drift between such adjustments.

The Fund distributes a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments.

MONTHLY COMMENT

Markets in October were roiled mainly by geopolitical tensions, but with strong economic performance in the background.

The escalating conflict in the Middle East has had a major impact on energy price volatility, raising investors' fears of renewed inflation, a sign that the difficulties of the past three years will continue. Nevertheless, the published statistics were reassuring, suggesting that these concerns will be addressed in the medium term. The clear trend toward the election of Donald Trump as US President has weighed on the bond market, with long rates soaring in anticipation of the fiscal loosening he would implement if elected.

Non-tech companies have reported excellent results, confirming their successful adaptation in a challenging environment and successful repositioning in the standardization of this environment.

After the US election, markets may experience some short-term volatility while analyzing the impact of the nominee's policies. But the Fed should independently continue its interest-rate normalization program and, barring further escalation of geopolitical conflicts, the market should return to its stable path.
