

EUROPE EVOLUTION

29 November 2024

INVESTMENT OBJECTIVE

The Europe Evolution Fund aims to overperform the Stoxx Europe 600 EUR Index NTR (SXXR) (the "Benchmark Index"). In order to achieve its objective, the Fund gains exposure to the performance of a portfolio composed of 75 companies in the European zone selected according to extra-financial (ESG) and financial quality criteria, combined with risk control mechanisms. The Europe Evolution Fund selects it from a universe made up of the 200 largest European capitalizations with sufficient liquidity. The latter is done around two axes that are an ESG bias (described in the prospectus available on the website of the Management Company), 25% of the companies with the lowest ESG scores being eliminated, and an important focus on the quality of the selected shares, only the most financially sound companies and with the best fundamentals being retained. At the end of this selection, the weight assigned to each constituent and included in a range of 0.666% to 3.333%, is obtained via a proprietary methodology based on adjusting the weight of each share in the portfolio according to its relative contribution to the risk of the portfolio as a whole (equal risk contribution methodology) in order to obtain an optimal portfolio allocation in profile of risk/return. The fund's exposure to the basket of securities can vary from 0 to 150% in order to stabilize the risk profile of the fund. It is reviewed weekly and adjusted for volatility. The Europe Evolution Fund applies a policy of distributing a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments. If the dividends actually received by the fund are lower (respectively higher) than the fixed dividend distributed, the net asset value of the fund will be reduced (respectively increased) compared to a fund distributing all the dividends actually received. Without taking into account the dividends actually received by the fund, the impact of the policy of distributing a fixed dividend on the net asset value of the fund is greater in the event of a decrease from its initial level (negative effect) than in the event of an increase (positive effect). Thus, in the event of a continued bearish market, the decline in the fund's net asset value will be accelerated.

PERFORMANCE SINCE INCEPTION

Performance	MTD	YTD	3 Months	6 Months	1 Year	3 Years	Since inception
EUROPE EVOLUTION Class I (EUR) DIST	1.84%	11.25%	-4.19%	0.04%	15.84%	18.26%	59.49%

MONTHLY COMMENT

The month of November was the most anticipated of the year with the American elections. Donald Trump won the election on November 5, 2024, by a wide margin against the Democrat Kamala Harris.

Following the elections, the stock markets showed very strong performance, with the S&P 500 increasing by 3.8% during the month of November, and the Nasdaq advancing by 2.6% during the same period. This good performance reflects primarily the victory of the Republican party in the general American elections (Presidency, House of Representatives, Senate), without a post-election period of uncertainty. The stock markets responded favorably to this scenario due to the anticipated reduction in taxation on businesses and high-income households outlined in Mr. Trump's program. The performance of stocks also reflects the strong performance of the American economy, with GDP growth in Q3-24 close to 3% and company results consistently exceeding analysts' expectations, with revenue growth close to 8%.

The Fed is expected to make a 25-basis point cut at the December meeting to bring the Fed funds rate to 4.5% and could be more cautious in 2025 if the activity remains well-oriented and inflation remains above the 2% target.

In Europe, financial markets showed the opposite performance. The Euro Stoxx 600 posted a slight decline of 0.2% in November, with a more pronounced decrease for the CAC-40 (-2.6%). European stock markets reacted negatively to the election of Mr. Trump due to the risk of increased tariffs on European products, in a context where exports are an important contributor to growth.

The ECB is expected to decrease its key interest rate by 25 basis points to 3% in December and could make 4 rate cuts in 2025. The increase in French political risk is also evident in the bond market, with the French risk premium against Germany reaching 87 basis points, its highest level since 2011.

We can expect the market to remain volatile in the coming months, as investors digest the initial measures of the new American administration.
