

INVESTMENT OBJECTIVE

The Quadrant Europe Fund aims to overperform the Stoxx Europe 600 EUR Index NTR (SXXR) (the Benchmark Index). In order to achieve its objective, the Fund gains exposure to the performance of a portfolio composed of 75 companies from the European region selected according to extra-financial (ESG) and financial quality criteria, combined with risk control mechanisms. The Quadrant Europe Fund selects from a universe made up of the 200 largest European capitalizations with sufficient liquidity and exposed to thematic sectors such as demographic trends, ecological transition, digitalization and new society. The latter is done around two axes that are an ESG bias (described in the prospectus available on the website of the Management Company), 25% of the companies with the lowest ESG scores being eliminated, and an important focus on the quality of the selected shares, only the most financially sound companies and with the best fundamentals being retained. At the end of this selection, the weight assigned to each constituent and included in a range of 0.666% to 3.333%, is obtained via a proprietary methodology based on adjusting the weight of each share in the portfolio according to its relative contribution to the risk of the portfolio as a whole (equal risk contribution methodology) in order to obtain an optimal portfolio allocation in profile of risk/return. The fund's exposure to the portfolio of securities can vary from 0 to 150% in order to stabilize the risk profile of the fund. It is reviewed weekly and adjusted for volatility. The Quadrant Europe Fund applies a policy of distributing a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments. If the dividends actually received by the fund are lower (respectively higher) than the fixed dividend distributed, the net asset value of the fund will be reduced (respectively increased) compared to a fund distributing all the dividends actually received. Without taking into account the dividends actually received by the fund, the impact of the policy of distributing a fixed dividend on the net asset value of the fund is greater in the event of a decrease from its initial level (negative effect) than in the event of an increase (positive effect). Thus, in the event of a continued bearish market, the decline in the fund's net asset value will be accelerated.

MONTHLY COMMENT

In terms of economic dynamics, in the United States, the GDP ended the year with a 2.3% Q/Q annualized growth, resulting in a 2.8% growth for the year. The disinflation trend continued, with core inflation ending the year at 2.5%. In this context, the Fed kept its benchmark interest rates steady at 4.25%-4.50%, with a communication that remained cautious in the face of the significant uncertainties introduced by the new policies of the Trump administration.

In Europe, the growth remains weak, at 1.1% in 2024, with significant differences between core economies and peripheral economies. Inflation continued to slow down, with core inflation in France and Italy already below the ECB's 2% target and on a compatible trajectory for other economies. The ECB thus reduced the deposit facility interest rate to 2.75% and communicated that it should continue the rate-cutting cycle.

The stock markets recorded a very strong performance in January. In the United States, the S&P 500 increased by 2.7%, balanced between Growth and Value styles. However, the end of the month was marked by significant volatility in technology stocks, particularly those related to artificial intelligence, following the announcement by the Chinese company Deepseek of a cheaper LLM than its American competitors. In Europe, the stock markets saw a very significant increase, with a 6.3% rise for the STOXX 600, 9.2% for the DAX, and 7.7% for the CAC 40 during the month of January. This performance reflects the prospect of rate cuts, positive earnings surprises in certain sectors such as luxury, and a catch-up compared to the lag in 2024.
